**Product Overview** (for complete specifications, see pages 2 & 3)

**Upgrade Capability:** LED components may be easily upgraded in the field to increase energy efficiency. Tool-less fastener allows quick LED retrofit while fixtures are still installed on site.

**Construction:** I.C. rated. ARRA, RoHS, REACH and Prop 65 compliant. Extruded aluminum housing for superior fit and finish. Grid mounted version can be installed from below. Runs and complex patterns are ordered, built and shipped with a single item # and can be built to match field conditions.

**Unbroken Illumination:** Continuous illumination in custom-length runs and patterns with illuminated corners.

**Electrical:** LED components by major manufacturers. Fixtures can be fitted with integral sensors, control interface devices and specialty LED components (consult factory). Standard Output, High Output and Custom Output options available.

**Optical:** Lenses available in medium or heavy diffusion, evenly illuminated.

**GB45RC2** - **120V** - **DVR** - **4’N** - **ASLMD** - **WSG**

- **Run or Pattern:**
  - Specify total run length (i.e. 48’ 1/8”) for illuminated patterns, follow overall length or dimensions with L, T, X, U, RECT or SQ (i.e. 48’ 1/8” RECT or 10’ X 10’ SQ).
  - If overall length or dims are unknown, use TBD and follow with L, T, X, U, RECT or SQ (i.e. TBD RECT or TBD SQ).
  - Consult factory for complex or multi-plane patterns.

### Notes

- **RGB and RGBW must be H.O. and DMX driver only. Do not select a CRI option.**
- **90+ CRI option increases wattage by nom. 14.5%.**
- **Shielding options are ASLMD and ASLHD only. # Sensor By Others, factory installed (consult factory).**

Gammalux Lighting Systems reserves the right to change details of fixture designs and construction at any time.

Revision Date: May 21, 2020

Gammalux products comply with ARRA Buy American requirements.
Specifications (continued on next page)

Electrical

Output: Standard (S) and high (H) options deliver a pre-set lumen package (see chart below). Custom-programmed output (C) is specified as LPF, WPF or % of High Output (see Custom Programmed Output page).

Static Driver: Osram Optotronic* programmable driver, wired for static operation (DVR).

0-10V Dimming: Osram Optotronic* programmable driver, wired for 0-10v control and dimming to 10% (ZTV10) or to 1% (ZTV1).

Step Dimming: Generic step dimming driver, two hot inputs for 100% and 50% output (SD2).

DMX Dimming: Generic DMX driver with three loose control wires exiting fixture at power feed location (DMX).

DALI Dimming: Generic DALI driver with two loose control wires exiting fixture at power feed location (DALI).

Lutron Dimming: Hi-lume LTE dim to 1% 2-wire 120V forward phase (LTEA2WA for PWM providing smoothest dimming or LTEA2WC for CCR in applications with EMI requirements). Hi-Lume 1% 2-wire 120V forward phase (LDE1).

White Emitter: Nichia 757G emitters* binned within 3 MacAdam ellipses in Osram or Gammalux proprietary array. 90+ CRI option with extended lead time (CRI code 9) results in nominal 14.5% drop in efficacy; increase calculated wattage by 14.5%.

RGB: Uses one row of Luxtech FX-RGB*. RGB with all channels at full output consumes approximately 6.57 watts per foot.

- Red channel at full output will provide approximately 3% of lumens as High Output value below.
- Green channel at full output will provide approximately 7.3% of lumens in High Output value below.
- Blue channel at full output will provide approximately 2% of lumens in High Output value below.

Battery Pack: Bodine BSL310LP* (BPE). 4W max input, 10W initial output, delivers min. 27% of High Output value per 4' length.

LED System: 70% lumen output (L70) at max 85 degrees C calculated at >60k hours. Fixtures are shipped with anti-static gloves to minimize the risk of damage to LEDs during installation. 5 year limited warranty.

Upgrade Capability: LED assemblies can be replaced in the future with the latest factory-provided and fully warranted components. On-board sensors, control interface devices and alternate LED components may be specified (consult factory). Fixtures bear UL & cUL Dry Location label. Damp Location label available (DL).

*Subject to availability; may be substituted by Gammalux. Components and specifications may be changed without notice.

* IES FILES WERE CREATED USING 3500 K DIODES @ 80+ CRI. WATTS AND CRI ARE MULTIPLIED BY 0.06 FOR 2700 K, 1.02 FOR 3000 K, 0.98 FOR 4000 K AND 0.93 FOR 5000 K DIODES TO MAINTAIN THE SAME DELIVERED LUMENS THROUGHOUT ALL COLOR TEMPERATURES. FOR 90+ CRI, INCREASE WATTS BY 14.5%. SEE ADDENDUM FOR CUSTOM PROGRAMMING.

Construction

Housing: I.C. rated. ARRA, RoHS, REACH and Prop 65 compliant. Extruded aluminum body 4.00” wide x 5.19” high, 6063T5, 0.070” min thickness. Each housing is 12” max unless longer housings are pre-coordinated with the factory to reduce joints and installation labor. Fixtures are built per approved factory drawings and tested as a complete system at the factory. Continuous runs and patterns are ordered, built and shipped with a single item #. Fixtures ordered as individuals are not designed to be joined together in the field.

Joiner System: Automatic alignment, no loose parts, one tool to tighten factory installed bolts for hairline seam. No light leaks.

Lamping: Patterns are fully illuminated. Runs ordered in Specific Length (Length Option S) may require special lamping components which consume more energy than posted values. Runs ordered in Nominal Length (Option N) may be length-adjusted at the factory to use standard lamping components. Factory drawings will show all dimensions for approval prior to production. Fixtures built to less than 4’ may require master/satellite driver installation - consult factory.

Mounting: Recessed into a ceiling system (REC). Fixtures surrounded by grid should be ordered in Nominal length (Length Option N) and can be installed from below. Consult factory for in-wall installation. Mud flange (GMR) includes integral expansion gap to allow for heat expansion with no pressure on surrounding plaster. GMR FIXTURE MUST BE INSTALLED PRIOR TO GYP.
Specifications (continued)

Optical

Reflectors: Shall be formed diffuse high reflectance aluminum.

Acrylic Satin Lens, Medium Diffuse: Snap-in. Shall be 100% DR acrylic (ASLMD).

Acrylic Satin Lens, Heavy Diffuse: Snap-in. Shall be 10

Finish

Acid etched or clear anodized housing electrostatically sprayed with high solids aliphatic two component polyurethane high (H) or semi-gloss (SG) to an avg. thickness of 2 mils. Custom finish, consult factory. Wood Finishes, back page.

Packing and Shipping

Fixtures built for continuous rows and patterns are given a specific location identifier, clearly identified on factory layout drawings, the fixture’s ID Label, protective wrapping and on each end of fixture carton. Shipping pallets are built with 2” clearance, extending beyond the length and width of cartons, providing shipping protection.

Approx. weight of 4’ module is 18 lbs. including carton. Weight of pallet and supplemental packing materials not factored in.

Gammalux Lighting Systems reserves the right to change the details of fixture design and construction at any time.

Gammalux products comply with ARRA Buy American requirements.
Mud Flange Detail

Fixture ships with steel spacer bracket to maintain aperture integrity during installation.

Mud flange assembly consists of a backing flange and scalloped flange. Plastic barriers protect the integral expansion gap from mud and paint.

Gyp material is embedded between the backing flange and scalloped flange, then drywall screws secure the drywall to the backing flange. Fiberglass tape, skim coat of plaster and paint are added on top of the scalloped flange with the plastic barrier installed throughout all procedures. After paint is dry, plastic barrier is removed, revealing clean expansion gap.
Sample Installations

Flush with 15/16" grid (T1W)

Modified per spec

Dropped with tegular tiles in 9/16" grid (TSTW)

No flange (NFR)

Gyp flange (GFR)

Mud flange (GMR)

Mud flange (GMR)
Custom Programmed Output

Custom Programmed Output can be specified to produce approximate Delivered Lumens per Foot, Percentage of High Output Value or Maximum Watts per Foot.

Delivered Lumens Per Foot
Gammalux deals only in delivered lumens per foot. When working to match or exceed a competitor product’s Lumens Per Foot package, be sure you are looking at their Delivered (through the lens) lumens per foot, not their System (bare board) lumens per foot.

In the Gammalux item #, use C as the Output designator and add a fixture description stating the required Lumens Per Foot value (ie: if you need 600 lumens per foot delivered by the fixture, the line note would read “Program = 600 LPF”).

Percentage of High Output Value
If the required delivered lumens per foot are not known, run lighting calculations using our High Output IES file and identify the percentage of increase or decrease required to produce the correct lighting in the space.

In the Gammalux item #, use C as the Output designator and add a fixture description stating the required percentage of decrease from our High Output value (ie: for 60% of our High Output value, the line note would read “Program = 60% of High Output”).

Maximum Watts Per Foot
In the Gammalux item #, use C as the Output designator and add a fixture description stating the required Maximum Watts per Foot (ie: if you need the fixtures capped at a maximum of 7 watts per foot, the line note would read “Program = 7 WPF”).

For all three methods, custom programming capability is currently 25-200% of our High Output value. For requirements outside of this range, consult factory.
